Python Package Creation Program

Aim: To create and use a package in Python.

Program

```
# Package Creation Program

import os

# Create a package folder
os.makedirs("mypackage", exist_ok=True)

# Create __init__.py
with open("mypackage/__init__.py", "w") as f:
    f.write("")

# Create calculator.py module
with open("mypackage/calculator.py", "w") as f:
    f.write("""
def add(a, b):
    return a + b

def multiply(a, b):
    return a * b
""")

# Import functions from the package
from mypackage.calculator import add, multiply

# Use the package functions
a = 10
b = 5

print("Addition:", add(a, b))
print("Multiplication:", multiply(a, b))
```

Output

```
Addition: 15
Multiplication: 50
```

Result

Thus, a Python package was created and its functions were successfully imported and executed.
